FLORENT TARIOLLE

florent.tariolle@gmail.com | linkedin.com/in/florent-tariolle/ | github.com/Tariolle

EDUCATION

INSA Rouen Normandie Rouen, France
MSc in Computer Science, Systems, and AI (Diplôme d'Ingénieur) Sep 2023 - Jul 2027

Lycée Dupuy de Lôme Lorient, France
CPGE MP (Classes Préparatoires aux Grandes Écoles, Mathématiques et Physique) Sep 2021 - Jun 2023

PUBLICATIONS & PREPRINTS

Opportunistic Target Selection *Jan 2026 - Present*
F. Tariolle, *et al.*. Submitted to *CAp 2026*.

- Developed a lightweight wrapper for early target selection in score-based black-box adversarial attacks without gradient access.
- Solved class drift on random-search attacks, yielding up to a 27 percentage point increase in success rate and 43% relative reduction in iterations on ResNet-50.

SLS-WM: Structured Label Smoothing for Discrete World Models *Feb 2026 - Present*
F. Tariolle. Targeting *NeurIPS 2026 Workshop*.

- Engineered an end-to-end World Model pipeline integrating an FSQ tokenizer and a causal transformer with Adaptive Layer Normalization and 3D RoPE.
- Optimized real-time inference to achieve sub-33 ms latency (30 FPS) on consumer hardware for frame-perfect reaction times.

RESEARCH & PROFESSIONAL EXPERIENCE

InterDigital Rennes, France
Research and Development Intern (VVC In-loop Filtering) *Upcoming*

- Researching and engineering a Neural Network for pixel-level classification to improve Versatile Video Coding (VVC) via in-loop filtering.
- Targeting a first-author academic publication or patent filing based on novel model architectures.

Enedis Rouen, France
Data Scientist (AI & Big Data) *Jan 2026 - Present*

- Designing a Digital Twin of the French electricity distribution network, utilizing generative AI models (Deep Learning) to simulate load curves for 38 million customers.
- Developing Big Data pipelines in Python (Spark) for the mass ingestion and processing of high-frequency time series data.

ENGINEERING PROJECTS & OPEN SOURCE

Rose Application (Active: 12K+ DAU) *Sep 2025 - Present*
Co-Lead Engineer & Architect

- Co-led a 6-person engineering team to scale the platform to market leadership within its sector.
- Architected a highly scalable infrastructure utilizing a Python backend, Cloudflare Workers for durable WebSocket relays, and injected JavaScript UI plugins.
- Optimized client-side efficiency by replacing heavy OCR components with deterministic, real-time DOM-parsing via WebSocket bridges.

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript
AI & Machine Learning: PyTorch, Deep Learning, Reinforcement Learning, Adversarial Machine Learning
Data & Systems: Spark, Cloudflare Workers, WebSockets, Distributed Pipelines
