

FLORENT TARIOLLE

florent.tariolle@gmail.com · LinkedIn · Google Scholar · GitHub

Seeking a six-month research internship in deep learning, starting April 2027.

EDUCATION

INSA Rouen Normandy	Rouen, France
Engineering degree, Computer Science and Artificial Intelligence, expected 2027	2023 – 2027
<i>Approx. U.S.-equivalent GPA: 3.7/4.0 overall; 4.0/4.0 latest semester.</i>	
University of Rouen Normandy	Rouen, France
Master's Degree, Machine Learning for Artificial Intelligence, expected 2027	2026 – 2027
Lycée Dupuy de Lôme	Lorient, France
CPGE MP (Preparatory Classes for Grandes Écoles, Mathematics and Physics)	2021 - 2023

PUBLICATIONS

DashVMC: Real-Time Discrete World Model Control in Geometry Dash Aug 2026

F. Tariolle and F. Yger. *Technical report.*

- Built a Geometry Dash controller with 8x8 FSQ tokens, action-conditioned transformer dynamics and an actor-critic initialized by behavioural cloning and refined with PPO in frozen-model rollouts.
- Trained offline on about two hours of recordings; deployed a decoder-free 16M-parameter policy at 60 FPS on an RTX 2060, outperforming its cloning baseline on all three official levels and a held-out layout.

Opportunistic Target Selection May 2026

F. Tariolle and F. Yger. *CAp 2026 (Conférence sur l'Apprentissage automatique).*

- Wrapped score-based black-box random-search attacks with early class confidence signals to reduce class drift.
- Improved ResNet-50 attack success by up to 27 percentage points and reduced censored-mean iterations by 43%; evaluated on 4,500 ImageNet runs across five classifiers.

EXPERIENCE

InterDigital Rennes, France
Deep Learning Research Intern May 2026 - Sep 2026

- Researched learned decoder-side filter selection as an alternative to VVC (H.266) neural in-loop filtering to reduce compression and quantization artifacts.
- Authored and filed more than 10 patent applications.

Enedis Rouen, France
Machine Learning Intern Jan 2026 - May 2026

- Worked on generative models and pipelines simulating high-frequency time series for 38 million customers, supporting a digital twin of the French electricity grid.

AWARDS

Finalist, Hack the World(s) Hackathon Jun 2026

24-hour hackathon on JEPAs and world models, sponsored by Yann LeCun

- Selected among 100 participants from 650+ applicants; finished in the top 5 of 25 teams.
- Built joint-embedding EEG SSL with SIGReg frozen-transfer baselines and Riemannian SPD covariance analysis.

OPEN SOURCE

Rose (30K+ DAU; 600+ GitHub stars) Sep 2025 - Present

Co-founder & Lead Developer — real-time customization tool

Led a six-person team across the Python backend, browser integration and infrastructure.

VisualTorch (300+ GitHub stars) Jul 2026 - Present

Maintainer & MCP Integration Lead — official PyTorch Ecosystem project

Built MCP integration for editable neural-network architecture diagrams.

TECHNICAL SKILLS

Programming: Python, C++

AI & ML: PyTorch, CUDA; Deep Learning, Self-Supervised Learning, World Models, Model-Based RL and Planning

Languages: French (native), English (TOEIC 970/990), Spanish (intermediate)

INTERESTS

League of Legends (top 0.1% of ranked players; two LAN wins), bouldering, and strength training.
